

Lecenté Flakes

How to apply Lecenté Flakes

STEP-BY-STEP

- Perform a manicure and prepare the natural nail for gel polish application.
- Following manufacturers instructions, carry out your gel polish service to the point of application of colour coat and cure. (To intensify the effect of the flakes apply to a similar base colour)
- Using your P1 brush, pick up a small amount of flakes on to your brush. Working from the free edge backwards towards the cuticle area, pat and press into the inhibition layer of your gel polish. Lightly remove any excess product with your brush.
- Should you wish to enhance the colour, apply a layer of base coat, cure and repeat the previous step.
- Apply Top Coat, making sure the nail is completely sealed, paying particular attention to the free edge and cure.
- Remove top film with lint-free pad saturated with 99% Isopropyl Alcohol.

STEP-BY-STEP (Chromed Effect)

- Perform a manicure and prepare the natural nail for gel polish application.
- Following manufacturer's instructions, carry out your gel polish service to the point of colour coat and cure.
- Apply a layer of Lecenté Layer it! Leaving a small margin around the nail and without capping the free edge. Cure for 60 seconds
- Using a Lecenté chrome applicator apply the flakes in circular motion working from the free edge backwards to the cuticle area. Remove any excess with a lint free pad.
- Should you wish to enhance the colour, repeat the previous step to add another layer.
- Apply Top Coat, making sure the nail is completely sealed, paying particular attention to the free edge and cure.
- Remove top film with lint-free pad saturated with 99% Isopropyl Alcohol.
